Problem Overview

The job search process is broken:

Resumes get rejected by ATS filters

Job seekers struggle to find the right roles

Tailoring resumes takes time

Interview preparation is inconsistent

Students lack strong project portfolios

Project Motivation

Why we built this:

To automate and simplify the entire career pipeline

To help job seekers transition faster

To offer an AI-driven, structured guidance system

To move from *manual* to *smart automated* workflows

Project Goals

Build

Build a modular multi-agent AI system

Automate

Automate resume → job search → interview → portfolio steps

Ensure

Ensure accuracy, personalization, and interoperability

Deliver

Deliver scalable APIs for future expansion

Our Five-Agent Architecture

Resume Analyzer

Job Finder

Resume Tailor

Interview Coach

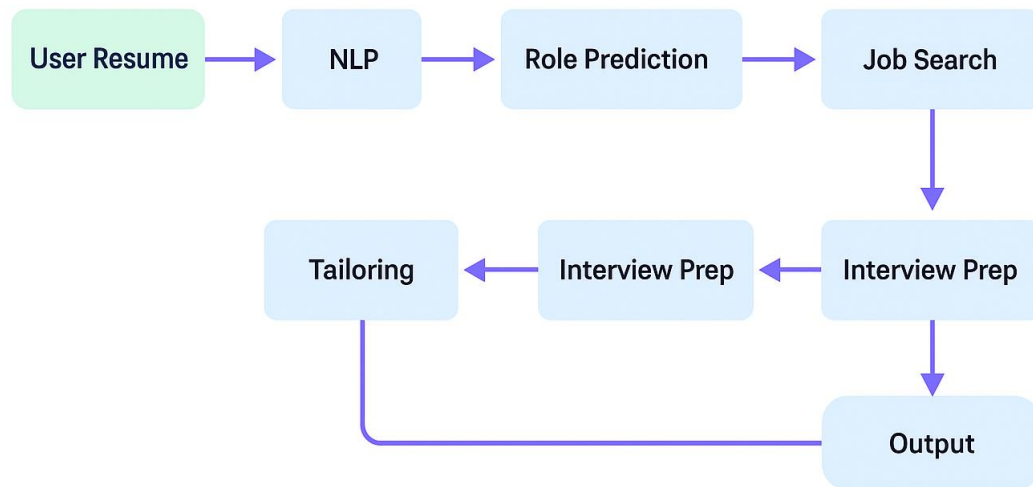

Project Mentor

Data Flow Diagram

Data Flow

Input Phase

- User uploads resume
- NLP extracts text, skills, experience and keywords

Processing Phase

- Role prediction model identifies suitable job roles
- Job search agent fetches relevant openings
- Interview prep agent generates role-based questions

Refinement Phase

- Resume tailoring aligns content with selected job description
- System prepares final structured output

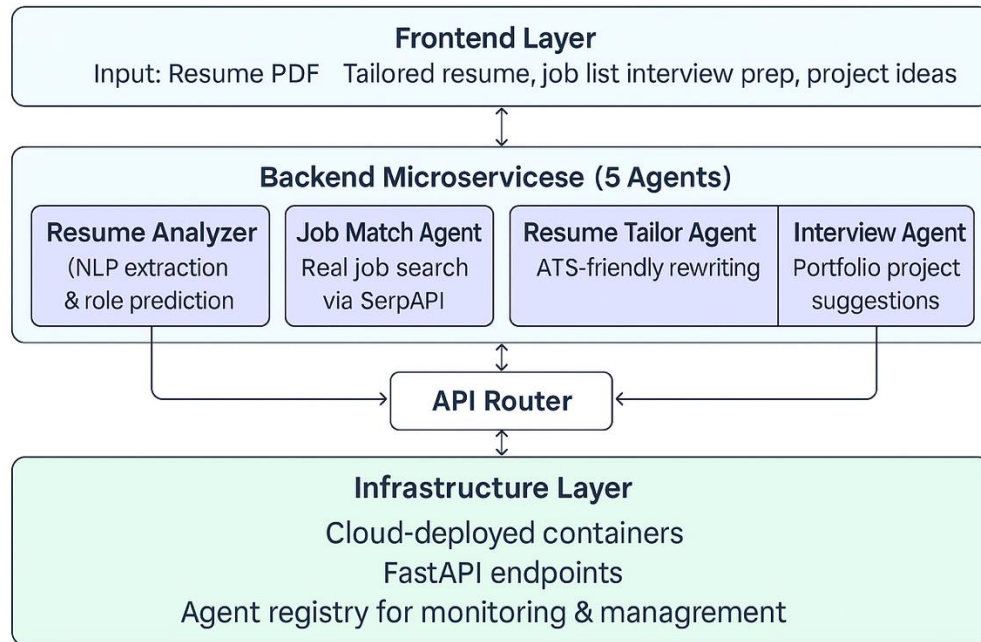

Final Output

- Job list + tailored resume + interview preparation + project ideas

System Architecture Overview

Architecture Overview

Architecture Layers:

- **Input Layer:** Resume PDF
- **Processing Layer:** NLP extraction & classification
- **Action Layer:** Job search, interview prep, resume tailoring
- **Output Layer:** Tailored resume, job matches, projects

Agent 1: Resume Analyzer

Role: Detects career direction from resume

Functions:

- PDF text extraction
- Clean preprocessing
- NLP-based role prediction
- Stores structured profile

Outputs:

- Predicted Job Role
- Processed Resume Text

Agent 2: Job Finder

Role: Finds real job openings

Functions:

- Queries SerpAPI → Google Jobs
- Filters by role, location, keywords
- Generates structured job cards

Outputs:

- Title | Company | Location
- Apply link
- Description summary

Agent 3: Resume Tailor

Role: Tailors resume for a specific job

Functions:

- ATS keyword injection
- Rewrite sections (skills, experience)
- Produces a clean, customized version

Outputs:

- Job-specific optimized resume

Agent 4: Interview Coach

Role: Provides interview readiness

Functions:

- Behavioral & technical questions
- STAR answers
- Company-specific preparation
- Warm-up practice scripts

Outputs:

- Full interview prep kit

Agent 5: Project Mentor

Role: Builds portfolio direction

Functions:

- Suggests 3–5 tailored projects
- Includes required tools, data sources
- Provides expected outcomes
- Helps prepare GitHub readiness

Outputs:

- Personalized portfolio roadmap

System Deployment & Agent Registry

Our multi-agent system is fully deployed on a cloud server using containerized microservices.

A centralized **Agent Registry Dashboard** displays all active agents, their metadata, capabilities, and API endpoints.

Each agent exposes a structured FastAPI interface, enabling real-time testing of resume analysis, job matching, tailoring, interview preparation, and project mentoring.

The deployment ensures **modularity, scalability, and independent debugging** for each microservice.

The live /docs interface (OpenAPI 3.1) provides interactive testing, making validation and integration seamless for the entire team.

Technical Stack

Demo

Key Results

Fully automated multi-agent pipeline

Resume tailoring quality improved by ~70% (keyword match)

Job search efficiency increased with real-time data

Interview preparation structured with STAR methodology

Portfolio projects now aligned with actual job trends

Impact

For Students:

- Faster job readiness
- Clear project direction

For Job Seekers:

- Higher ATS score
- Stronger interview confidence

For Institutions:

- Automated career coaching at scale

Future Enhancements

Deploy full system to cloud (AWS/GCP)

Build a dashboard UI (Streamlit/React)

Add job tracking & analytics dashboard

Integrate LinkedIn job scraping

Multi-language resume support

Add recruiter-side tools

Conclusion

The Multi-Agent Career System successfully:

Automates the entire job search pipeline

Delivers personalized, actionable guidance

Reduces time-to-application

Enhances job readiness and portfolio strength

Provides a scalable framework for career AI tools

THANK YOU
